

# Product Release Notes

October 2023

# Release Notes

---

## Summary

This release cycle includes new features and improvements to the software deployed within the period;

- 21 September 2023 → 23 October 2023

During this period, we have focused on implementing various requests for enhancements whilst providing significant improvements to enhance the overall performance and user experience.

## Abbreviations

A&E	Access & entitlements
AM	Asset management
COMP	Compliance
FCI	flydocs Integrations
FSCC	flydocs scanning control centre
RSP	Records storage project

## Change Log:

- **Daily scheduler for document trigger (RSP)**

**Description:** Created a daily scheduler code to trigger documents to respective aircraft based on the available range at a scheduled time every day. This enhancement ensures timely document distribution and management, enhancing efficiency across the system.

This enhancement applies to all projects including feed file processing, FSCC file processing, m-archive, and compilation.

- **Dynamic key vault value handling (RSP)**

**Description:** Added dynamic handling of Key Vault value changes. If the value in the Key Vault is changed the system now automatically updates the corresponding details in local variables. This enhancement ensures security and real-time updates to maintain data integrity. This feature is applicable in all projects including feed file processing, FSCC file processing, m-archive, and compilation.

- **FCI-12317 - Neos Techlog attachment enhancement (RSP)**

**Description:** Implemented an option to automatically attach Techlog documents to the respective asset based on the tail name available in the document/file name. This enhancement eliminates manual intervention, improving document management efficiency.

Usage: Applicable for documents received in the Audit view of MCC.

Engine Type	Client	Part Number	Serial Number	Manufacturer	TSN	CSN	Aircraft Position	Install Date	Status At	Currently On	Aircraft Type	Owner	Lessor	Entry into Service Date	Lease Expiry Date	Link To Inventory	Activate Return Project Management	Activate Delivery Bible
		TRENT772B6	H1878															
Trent 700																		
	VAA	Trent772B6-16	41878	Rolls Royce			2	22-02-2020	26-09-2023	G-VLUV	A330-343							

- **WP Row status preservation (FCI)**

**Description:** Ensured that the WP row status "Assigned to BAU" does not change or update to any other WP status during delta feed updates. This change maintains consistency and status integrity for workpacks.

Impact: WP row status "Assigned to BAU" remains unaffected by the delta feed population.

- **Auto assignment of tech and cabin logs (FCI)**

**Description:** Enhanced the system to automatically assign Tech Logs and Cabin Logs based on the specified range. Now, documents are automatically moved to the corresponding aircraft when the value is input manually, improving document workflow and management.

- **Return conditions - Limit calendar to from lease contractual delivery date to contractual re-delivery date (AM)**

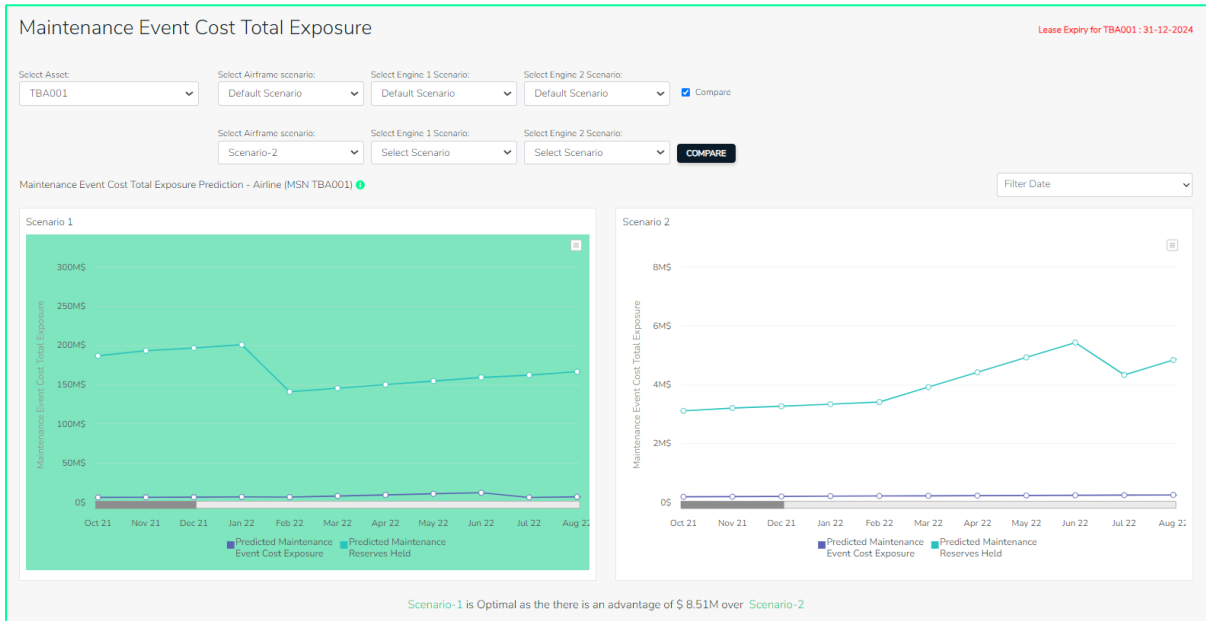

**Description:** Limit Calendar within the Return Conditions page to enable users to select up until the Lease Expiry date.

- **Add lease expiry date throughout the dashboard pages (AM)**

**Description:** The lease expiry date is added to all dashboard pages to help users get a clear visibility on the lease expiry date of that particular asset.

- **Provide suggestions for optimal scenarios when utilising comparison. (AM)**

**Description:** When utilising the scenario modelling, the most optimal scenario will now be highlighted within the app. This will provide instant cost savings to the user, enabling quick financial decisions against each comparison.

- **Link/unlink major components (AM)**

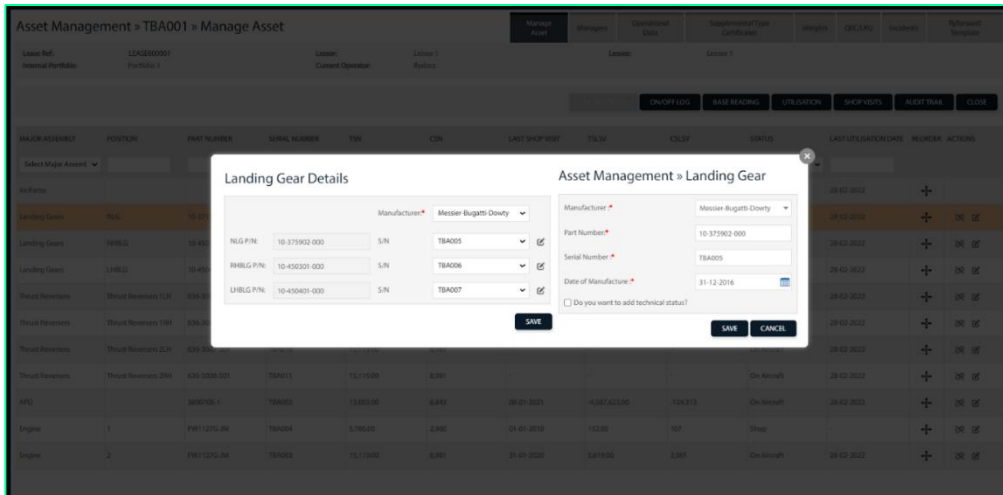

**Description:** Users are now able to link and unlink major components from one single page which speeds up this process, rather than having to open multiple pages.

- **Rename files function under CS module (CS)**

In the Current Status area, we have introduced a new option to rename the files that are uploaded within the CS module.

**Note:** The 'rename' option will appear only to those files that have been uploaded to the CS module which also means that files uploaded to the other module and copied/moved/attached to CS will not have a rename file option.

- **November Release Notes**

These are due to be circulated w/c 4<sup>th</sup> December 2023.

If you have any questions about these release notes, please don't hesitate to contact [product@flydocs.aero](mailto:product@flydocs.aero)
